
NAS NORTH ISLAND - NAVY REGION SOUTHWEST

NAVY ENVIRONMENTAL LEADERSHIP PROGRAM

COMPLIANCE

MANAGEMENT ACTION PLAN

LEAD ACTIVITY

Naval Air Station (NAS) North Island

STATUS

Completed

MISSION

Summarize status of environmental restoration and compliance programs

DESCRIPTION

The NAS North Island Management Action Plan (MAP) was developed in 1994 to summarize the status of the installation restoration and compliance programs, including the resolution status of technical issues, and presents a comprehensive strategy for implementing response actions. The NAS North Island environmental program managers will use the MAP to direct and monitor the installation restoration (IR) and compliance programs.

A MAP review team was established to prepare annual updates to the MAP, and to create a forum for environmental discussions. The team holds meetings, as necessary, to share information regarding environmental investigations, treatment and remediation technologies, data management and analysis, background levels of contaminants in environmental media, data gap review, risk assessment protocols, compliance strategies, and other environmental restoration issues relevant to the MAP.

NELP is now pursuing implementation of an automated Environmental Management System (EMS) using the environmental modules of ALFA Version 2.0. [ALFA is a Facilities Information System \(FIS\) software tool](#) developed by NAVFAC. It is planned that the MAP will be replaced by full implementation of ALFA 2.0.
